

**ORGANIZATION AND VISUALIZATION OF PERFORMANCE
DATA IN SELECTED DISPLAY MODES**

Abstract of the Disclosure

Performance data is organized and displayed in selected display modes to facilitate an analysis of the data. The performance data includes various data, such as profile data associated with thread activity of one or more applications. In order to gain a better understanding of the data, a user can dynamically select between different display modes. The different display modes include a function-centric mode focusing on activities within a function and a thread-centric mode focusing on activities of an individual thread.
